## List of Figures

1-1:	Location of Clinton River East Subwatershed	1-1
1-2:	Subwatershed communities	1-2
1-3:	Subwatershed drainage areas	1-3
1-4:	Congressional districts	1-4
	U.S. Capitol Building – Washington D.C.	1-4
	Michigan Capitol Building – Lansing, Michigan	1-4
	Drainage Areas	1-5
	The Great Lakes Basin	1-5
1-5:	Watershed management plan development	1-12
	A Critical Source of Sediment in the Subwatershed – Construction Site Runoff	1-14
	The Planning Process in Action – A CREW SWAG Meeting	1-14
1-6:	Participating school districts covered by the WMP	1-15
	The Physiographic Regions of Southeastern Michigan	2-2
2-1:	Soil associations in the subwatershed	2-3
2-2:	Elevation in the subwatershed	2-4
2-3:	Wetland locations and types in the subwatershed	2-6
	Riparian Corridor	2-7
	Stream Meanders	2-7
	Habitat Regions of the Eastern United States	2-8
	An Example of a Reptile in the Subwatershed: A Snapping Turtle and Holland Ponds	2-10
	A Creek Chub from the Harrington Drain – MDNR Fish Stocking Photo	2-11
	Mayfly	2-11
	Wavy-rayed Lampmussel	2-11
2-4:	Natural Features	2-12
	Satellite Image of Great Lakes Marsh Area in Harrison Township	2-12
2-5:	Population densities in the subwatershed	2-14
2-6:	Median household incomes in the subwatershed	2-16
	Suburban Development Patterns in a Wealthy Portion of the Subwatershed	2-16
	New Development in a Suburban Area of the Subwatershed: Exhibiting Poor Construction Sediment Runoff Control	2-16
	Swamp Land at Holland Ponds	2-18
2-7:	Land cover in the subwatershed circa 1830	2-19
	Beech/Maple Forest	2-19
	Mixed Oak Forest	2-19
	Multiple Present Day Land Uses: Agricultural, Single Family Residential, & Utility	2-19
2-8:	Land use in the subwatershed – present day	2-20
	Present Day Land Uses: Transportation & Commercial	2-21
2-9:	Land use in the subwatershed – future	2-23
2-10:	Land cover/use comparison	2-24
	DWSD WWTP	2-25
	Romeo WWTP	2-25
2-11:	Sewer systems in the subwatershed	2-26
	Mt. Clemens WWTP	2-26
2-12:	Schematic of a combined sewer system	2-27
	Schematic of an OSDS	2-27
2-13:	Waters under the jurisdiction of county-level government	2-28
	Storm Sewer Catch Basin	2-28
	Storm Sewer Construction	2-28

2-14: Public Drinking Water Supplies	2-30
2-15: Private Wells	2-31
Typical Private Well Casing Cap	2-31
2-16: Pollution control facilities / potential discharge points	2-32
2-17: Storage tank sites (above and below ground)	2-33
An Underground Storage Tank Site: Gas Station	2-33
Transportation Infrastructure: Van Dyke Avenue in Shelby Township	2-33
2-18: Transportation Infrastructure	2-34
Gratiot Ave. Bridge	2-34
Mt. Clemens Train Depot	2-34
Selfridge ANGB	2-35
Sundog Marina in Harrison Twp	2-35
2-19: Historical/cultural sites in the subwatershed	2-36
Historical Site – Carnegie Library, Mt. Clemens	2-36
Memorial Park – St. Clair Shores	2-36
2-20: Nature areas / parks	2-37
3-1: Effects of urbanization on runoff	3-1
Lakeside Mall Parking Lot in Sterling Heights	3-1
A Building in the Floodplain – Shelby Township near 21 Mile Rd	3-2
Straightened Section of the Middle Branch of the Clinton River in Macomb Township	3-2
Clinton River Flooding – May 2004	3-4
3-2: Biological study locations and summarized data	3-16
3-2: Biological study locations and summarized data (continued)	3-17
Purple Loosestrife	3-21
Eurasian Water-milfoil	3-21
Spiny Water Flea	3-21
Zebra Mussel	3-21
3-3: USGS streamflow gages	3-22
3-4: Flashiness indices and trend at the Fraser gage	3-23
3-5: Flashiness indices and trend at the Mt. Clemens gage	3-23
3-6: Floodplains	3-24
Clinton River Spillway Weir – Normal Conditions	3-24
Clinton River Spillway Weir – During May 2004 Flooding	3-24
3-7: Survey Locations	3-26
Clinton River at Ryan Road	3-27
Longstaff Drain at Hayes Road	3-27
Harrington Drain at 14 Mile Rd	3-27
Clinton River – Bridgeview Rd	3-27
Gloede Drain at 22 Mile Rd	3-27
3-8: Identified problems	3-28
Middle Branch of the Clinton River at Heydenreich Rd	3-30
Kingsbury Drain at 23 Mile Road	3-30
Healy Brook Drain at Hayes	3-30
Gloede Drain – Wood Debris	3-31
Gloede Drain – Impacted Buffer	3-31
Gloede Drain – Turbid Water	3-31
Gloede Drain – Evidence of Erosion	3-31
Healy Brook Drain – Obstructed Culvert	3-32
Healy Brook Drain – Wood Debris	3-32
Healy Brook Drain – Check Dam of Rocks	3-32
Harrington Drain – Outfall with Sediment	3-33
Harrington Drain – Trash in Stream	3-33
Harrington Drain – Erosion Under Outfall	3-33

	Typical House in the Moross Street / Wilson Street Neighborhood in Mt. Clemens	3-35
	Apartments on Clara Street in Mt. Clemens – High Imperviousness and Stained Parking Lot	3-35
3-9:	Streambank conditions in the subwatershed	3-36
3-9:	Streambank conditions in the subwatershed (continued)	3-37
	Sediment on Gratiot Avenue near 15 Mile Road in Clinton Township	3-38
	Debris in Catch Basin on Gratiot Avenue near 15 Mile Road in Clinton Township	3-38
	Turf Sports Field Surrounded by Wooded Areas at Budd Park in Clinton Township	3-39
	Boat Washing on Impervious Surface at a Marina in Harrison Township	3-39
	Dumpster Area on Impervious Surface with Debris on Ground – Gas Station in Macomb Township	3-40
	Impervious Surfaces – Rooftops and Concrete – at the Department of Public Works in Shelby Township	3-41
3-10:	Impervious cover based on land use type	3-43
3-11:	Relationship between impervious cover and stream quality	3-44
	Aerial of a Portion of the Sensitive North Middle Branch Catchment	3-45
	Aerial of a Portion of the Non-supporting Central Main Branch Catchment	3-45
3-12:	Location of listed waterbodies	3-49
	Metro Beach Metropark	3-49
	USACE for Macomb County, Michigan Public Participation Plan	4-1
	SWAG Meeting	4-1
	Stakeholder Workshop	4-1
	Stakeholder Workshop	4-2
	Community Forum	4-3
	Community Forum #2	4-5
	CRWC Website: Utilized for Draft Plan Distribution and Receiving Public Comments	4-5
	Stakeholder Workshop #2	4-5
	CRWC Display at Home and Garden Show – Detroit, MI	4-8
	Information Display at Bruce Township Offices	4-9
	An Example of Public Education Materials Developed by SEMCOG	4-9
	Volunteers Participating in Cleanup Activities in Fraser: An Example of Currently Implemented Action that will Continue into the Future	4-10
5-1:	Location of water quality monitoring and stream flow gauges	5-6
5-2:	Estimated sediment load by source and catchment	5-14
5-3:	Agricultural land uses in the Middle Branch catchments identified as critical areas for sediment load reductions	5-16
5-4:	Urban land uses in all catchments identified as critical areas for sediment load reductions	5-17
5-5:	Estimated phosphorus load by source and catchment	5-25
5-6:	Agricultural and septic system land uses identified as critical areas for sediment load reductions	5-28
5-7:	Monthly mean stream flows	5-39
5-8:	Flashiness indices and trend at the Fraser gage	5-39
5-9:	Flashiness indices and trend at the Mt. Clemens gage	5-40
	Algae on the Clinton River: Goal I, Objective B Aims to Address This Issue	6-1
	Fishing on the Clinton River: Goal III Aims to Promote This and Other Opportunities	6-2
	Creek Chub from the Healy Brook: Goal IV Aims to Protect Habitat for These and Many Other Organisms	6-3
	A Subwatershed Advisory Group Meeting: Continued Meetings and Action (Goal VI, Objective B) is a Key Making this Plan a Success	6-3

	The Clinton River, its Streambanks, Riparian Corridor, and Associated Habitat: Examples of Natural Features to be Addressed through Goal VII	6-4
	St. Clair River and Lake St. Clair Comprehensive Management Plan	6-4
	A Community Forum: Public Involvement and Education is a Tool that Can be Used to Address Many of the Goals and Objectives of this Plan	6-5
	Wildlife Corridor	7-7
7-1:	Example of an Overlay Zone	7-8
	Floodplain Forest at River Bends Park: With Environmental Assessment, a Nearby Proposed Development would Consider its Impacts on this Resource	7-9
	Riparian Buffer	7-10
7-2:	Conventional subdivision compared to cluster development	7-11
	A Marina	7-14
	Example of Land Division	7-14
	A Subdivision being Constructed: Woodberry Estates	7-15
	A Subdivision: Woodbury Estates in Macomb Township	7-15
7-3:	Long narrow vs. short narrow waterfront lots	7-16
	Example of Unbuildable Lots	7-16
	Example of Access	7-16
	Example of Buildability	7-17
	Example of Clustered Lots	7-17
	Drawing of Clustered Lots	7-17
	Storm Sewer Outfall w/ Dry Weather Flow – possible illicit discharge	7-18
	Silt Fence for Sediment Control	7-21
	Steelhead in the Clinton River	7-33
	A Storm Sewer Outfall to the Harrington Drain: IDEP Programs Target These to Identify Illicit Discharges	7-35
	CRWC Stream Leaders	7-35
	CRWC Adopt-A-Stream	7-36
	MDNR Collecting Fish Data: White Suckers in the Healy Brook	7-36
7-4:	MDEQ monitoring basins for Basin Year 3 (2004).	7-37
	MDEQ Basin Years 1, 2, 4 & 5	7-37
	Stream Crossing Watershed Survey Procedure	7-38
	Unified Stream Assessment	7-38
	Unified Subwatershed and Site Reconnaissance: A User's Manual	7-38
	Opportunities for Water Resource Protection in Local Plans, Ordinances, and Programs	7-39
	Subwatershed Photo Tour: View of Downtown Mt. Clemens from a Dock on the Clinton River	7-40
8-1:	General Schedule	8-1
8-2:	Implementation milestones	8-2
	Example of Public Education Materials	8-8
	Watershed Sign	8-10
9-1:	Relationship between the three elements	9-1
	The Planning Process (detail) – see Chapter 1 for Expanded Information	9-2
9-2:	Success levels	9-2
	Field Data Collection for Developing the Plan: Unified Stream Assessment	9-10
	Options for Local Government Funding of Water Quality Activities	10-1
	SWAG Meeting	10-1
	Example of a Program Implementation Activity: Volunteers Participating in the Clinton River Watershed Council's Clinton Clean-Up at Harrington Trails Park	10-7
	Example of a Capital Project: Enclosing the Nicol Drain in Macomb Township	10-7

## List of Tables

1-1:	Subwatershed communities	1-2
1-2:	Subwatershed drainage areas	1-3
1-3:	Congressional districts by community	1-4
2-1:	Climatic data for the subwatershed	2-1
2-2:	Wetland coverage in the subwatershed	2-6
2-3:	Natural features	2-12
2-4:	Year 2000 community populations and densities	2-13
2-5:	Community populations for 1970, 2000, and 2030	2-15
2-6:	Subwatershed community populations for 2000 presented on a catchment basis	2-15
2-7:	Community income, poverty, and education levels	2-17
2-8:	Land cover in the subwatershed circa 1830	2-18
2-9:	Land use in the subwatershed – present day	2-21
2-10:	Land use in the subwatershed – future (year 2030)	2-22
2-11:	Sewage disposal in the subwatershed, by catchment	2-25
2-12:	Transportation infrastructure, by catchment	2-33
2-13:	Historical/cultural sites in the subwatershed, by catchment	2-35
2-14:	Nature area / park summary	2-36
2-15:	Largest nature areas / parks in the subwatershed	2-37
3-1:	Water quality standards	3-5
3-2:	Threatened or endangered species in the subwatershed	3-20
3-3:	Detailed road-stream crossing survey results	3-29
3-4:	Assumed percent impervious values	3-41
3-5:	Impervious cover percentages	3-42
4-1:	Results from feedback forms	4-6
5-1:	Status of designated uses	5-3
5-2:	Representative water quality monitoring stations and associated catchments and subwatersheds	5-7
5-3:	General sources of sediment	5-10
5-4:	TSS data used to estimate current and target loads	5-12
5-5:	Estimated existing annual loads and associated reductions by representative monitoring station	5-12
5-6:	Estimated annual TSS load and additional load to account for streambank erosion by catchment	5-13
5-7:	Estimated TSS load reduction by catchment	5-14
5-8:	General sources of phosphorus	5-20
5-9:	TP data used to estimate current and target loads	5-22
5-10:	Estimated existing annual TP loads and associated reductions	5-23
5-11:	Estimated phosphorus load by catchment	5-24
5-12:	Estimated TP load reduction by catchment	5-24
5-13:	General sources of pathogens	5-31
5-14:	E. coli data used to estimate current and target loads	5-33
5-15:	Existing annual loads and associated needed reductions	5-33
5-16:	Hydrologic flow change sources	5-36
5-17:	Contaminated sediments – sources and causes	5-44
5-18:	PCBs – sources and causes	5-44
	Goal I – Objectives	6-1
	Goal II – Objectives	6-2
	Goal III – Objectives	6-2
	Goal IV – Objectives	6-3
	Goal V – Objectives	6-3
	Goal VI – Objectives	6-3

Goal VII – Objectives	6-4
6-1: Relationship of WMP goals to RAP BUIs	6-5
6-2: Relationship of WMP goals to Lake St. Clair Comprehensive Management Plan goals	6-6
8-1: Relationship of actions to goals and objectives	8-32
8-1: Relationship of actions to goals and objectives (continued)	8-33
8-2: Action details	8-34
8-2: Action details (rows continue across from previous page)	8-35
8-3: Potential funding/technical assistance	8-36
8-3: Potential funding/technical assistance (rows continue across from previous page)	8-37
8-4: Numerical cross-reference for previous table	8-38
8-4: Numerical cross-reference for previous table (continued)	8-39
8-5: Loading reductions that result from addressing known sources	8-43
8-6: Phosphorus load reductions associated with the addressing of known sediment problems	8-45
9-1: Measures of success associated with the actions	9-7
9-1: Measures of success associated with the actions (continued)	9-8
9-2: Evaluation action details	9-11
9-3: Goals and objectives evaluation questions	9-16
9-3: Goals and objectives evaluation questions (continued)	9-17
9-3: Goals and objectives evaluation questions (continued)	9-18
10-1: Legal relationship options	10-4
10-1: Legal relationship options (rows continue from previous page)	10-5
10-2: Funding mechanisms	10-8
10-2: Funding mechanisms (rows continue from previous page)	10-9
10-3: Examples of actions and potential funding mechanisms	10-10
